

ATUL

Security Analyst

Delhi-NCR | Open to relocation

9996623936 | atul0609@zohomail.in | [linkedin.com/in/atulatul6](https://www.linkedin.com/in/atulatul6) | atul-atul-6.github.io/portfolio/

SUMMARY

Application security-focused IT professional with 4+ years of experience testing authentication, authorization, session management, and API security on live, high-traffic government booking platforms. Currently completing IIT Guwahati's Cybersecurity Micro-Credit Program (final exams complete, expected September/October 2026). Skilled in secure coding practices, log analysis, incident investigation, and AWS cloud security, with a background in Java full-stack development and cloud engineering that bridges development, operations, and security.

SKILLS

- **Risk & Compliance** – IAM, OWASP Top 10, ISO 27001 (pursuing), MITRE ATT&CK awareness, Security Monitoring, Incident Handling, SIEM (basic), Vulnerability Assessment, API Security Testing, SOC, HIPAA framework, GDPR, Risk Assessment, Risk Management.
- **Security Tools (hands-on lab work, IIT Guwahati Cyber Security programme)** – Burp Suite, Metasploit, Wireshark, Wazuh, Trivy.
- **Application Security Activities** – Web Application Security Testing, API Security Testing, Authentication & Authorization Testing, Input Validation & Business Logic Testing, Log Analysis and Incident Investigation, Bot Detection, Browser Fingerprinting.
- **Cloud Security & Platforms** – AWS (IAM, VPC, CloudTrail, CloudWatch, Lambda, ECS, EKS, DynamoDB, S3, CloudFront, Route 53, Glue), Docker, Kubernetes, Terraform, CloudFormation, CI/CD Pipelines (CodePipeline, CodeBuild, CodeDeploy), ELK Stack, Grafana.
- **Programming** – Python, Java, SQL, Node.js, HTML, CSS, JavaScript, React.js (basic).
- **Databases** – MySQL, RDS, Redshift, Snowflake, DynamoDB, SQL Developer.

EXPERIENCE

IRCTC (Company: Ace Infotexis Pvt. Ltd.)

Application Support Engineer

Project: Bus, Ferry, Hotel, Luxury Trains, Heliyatra, Trek | Feb 2025 – Present

- Conducted authentication, authorization, session management, and input validation testing across reservation and payment systems.
- Validated secure API communications between booking, payment gateway, and external systems, reducing the risk of data exposure.
- Investigated application logs and system events to identify root causes of incidents and resolve system and security-related issues.
- Performed database validation using SQL to verify transaction integrity and detect inconsistencies in booking and refund workflows.
- Supported critical government booking and reservation platforms serving thousands of users daily.
- Served as sole tester for 46 production releases, performing post-deployment security and functionality verification.

Project: Lakshadweep Passenger Reservation System

Passenger Reservation & Voyage Management Platform (Web & Mobile App.) | Sep 2025 – Present

- Identified application vulnerabilities, security gaps, and functional defects, collaborating with developers to implement corrective measures before deployment.
- Verified role-based access controls, business logic, data integrity, and transaction flows to ensure system reliability and prevent unauthorized operations.
- Traced production incidents through log analysis and root-cause identification, contributing to improved system reliability and security posture.
- Executed functional, regression, integration, and security testing of web and mobile applications before production releases.
- Owned end-to-end testing, validation, and production support of the passenger reservation system for inter-island and mainland ship travel as sole QA and Application Support Engineer.
- Tested critical modules including voyage scheduling, quota management, permit integration, ship ticket generation, booking modifications, cancellations, refunds, waitlist confirmation, Emergency (EQ), and Special Quota bookings.
- Coordinated directly with business stakeholders, port officials, UTLA representatives, and development teams for requirement analysis, UAT, issue resolution, and release sign-off.
- Served as sole tester for 53 production deployments, monitoring post-release stability and availability of the reservation platform.

Cognizant Technology Solutions

Programmer Analyst | Aug 2022 – Oct 2024

- Monitored applications proactively using CloudWatch, ELK, and Grafana, flagging security and performance issues before they affected users.

- Designed and improved AWS applications using IAM, VPC, and KMS, strengthening cloud security and protecting company data.
- Built CI/CD pipelines that reduced deployment errors and shortened release times.
- Managed Docker containers and Kubernetes clusters, enabling more scalable, reliable, and consistent application deployment.
- Created Java and Node.js backend services and APIs to support enterprise system integration.
- Architected serverless applications using SNS, SQS, and Lambda, improving manageability and scalability.

EDUCATION

- Micro-Credit Program - Cyber Security – Distance Learning (in association with Acciojob)
IIT Guwahati | Feb 2025 – Expected Sep/Oct 2026 (final exams complete)
- Self-directed cyber security study; researched and enrolled in the IIT Guwahati Cyber Security programme
Oct 2024 – Feb 2025
- B.Tech – Computer Science & Engineering (Cloud Computing & Mobile Applications – Specialization with IBM)
SRM University, Delhi-NCR | 2018 – 2022 | CGPA: 7.7/10

PROJECTS

- **AI Powered – TicketWave Bot Detection System (for Ticket Booking Platforms):** Built a real-time bot detection engine using passive mouse behavioral analysis — no CAPTCHA, zero user friction — by collecting browser signals via an invisible JavaScript collector injected into the page. Engineered a Chrome Extension for live session monitoring that integrates into an existing production environment without access to source code, demonstrating non-invasive security tooling deployment. Designed to detect and block automated bots that book tickets faster than human users, protecting fair access on high-demand ticketing platforms.
- **Serverless Web App on AWS:** Built a scalable serverless application using Lambda, API Gateway, S3, DynamoDB, CloudFront, and IAM, with least-privilege access control and pay-per-use scaling to reduce infrastructure cost.
- **Secure Data Warehousing on Amazon Redshift:** Designed a data warehousing solution with S3 and VPC for customer data ingestion and extraction, isolating the warehouse inside a private network boundary and tuning distribution keys to improve query performance.
- **Sales Data Analysis with Amazon QuickSight:** Produced interactive dashboards to support data-driven decision-making.

CERTIFICATIONS

- ISO/IEC 27001:2022 Lead Implementer (Dec 2025 – Expected July 2026)
- AWS Certified Solutions Architect – Associate (expired May 2026)
- Cybersecurity IT Fundamentals Specialization
- OWASP Top 10
- Microsoft Certified: Azure Fundamentals
- AI Tools Workshop – Be10X

CYBERSECURITY TRAINING PROJECTS

- **AIG - Shields Up: Cybersecurity virtual experience (Forge)**
 - Analyzed threat intelligence reports aligned with CISA publications.
 - Researched and reported vulnerabilities.
 - Wrote Python script to brute force decryption keys for ethical hacking and avoiding ransom payments.
- **Deloitte Australia - Cybersecurity Virtual Experience (Forge)**
 - Analyzed logs from web requests to look for any irregularities that might indicate a security breach.
 - Identified insider threats as well as automated abuses using APIs.
 - Assessed feasibility of an attack on intranets.
 - Used basic threat analysis techniques.
